

Managing Your VHub Storage Using WebDAV

Web-based Distributed Authoring and Versioning, or WebDAV, is a set of extensions to the Hypertext Transfer Protocol (HTTP). WebDAV allows users to edit and manage files collaboratively on remote World Wide Web servers like VHub. With a compatible client (laptop, desktop, etc.) you can use the WebDAV protocol to remotely access and manage your files on VHub as if they were on your local machine (albeit a bit more slowly). See the following knowledge base article for helpful tips on how to use WebDAV on your platform (Mac OS X, Linux, or Windows):
